

Welcome to HTLcoin.co

The First booking system in crypto world.

About HTL Coin

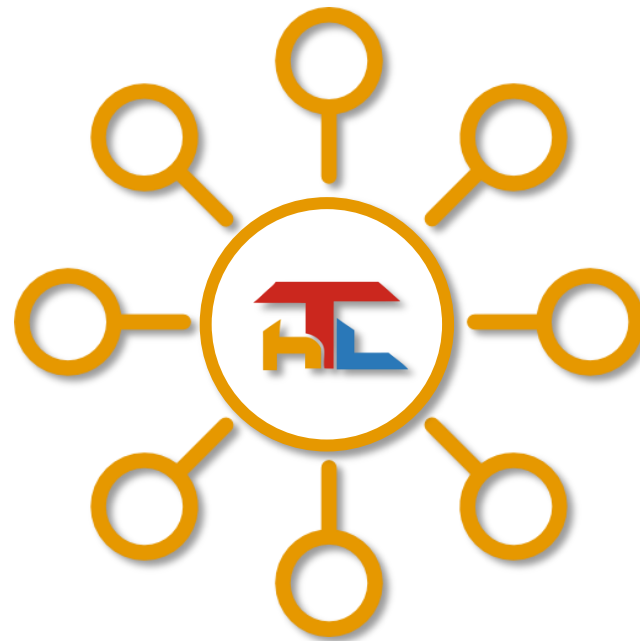

HTLcoin is a booking system thought to make a real revolution in Hotels world, regarding the online reservations process for all the receptive structures (hotels/b&bs/hostels/appartments..etc). The main objective is to offer a better service to all the global network of the hotels sector and their clients, breaking down the principal barrier hindering the correct development of this sector which is facing the difficulty of the continuous high costs of offering the essential services to the end user. This is how was born our idea to ride the wave of this historical transitional moment which is leading us to the future; and to exploit the technology of the blockchain and its surrounding world offering to the hotel sector a 360 degree solution with a very low cost and a maximum security obtaining a real utility tangible and concrete from the many nominated blockchain, coins and their possessing community.

HTL Technology

HTLcoin is created on the ethereum network with ERC20 technology respecting a (smart contract), othersaid all the transactions are made underwriting a precise list of requirments and rules which act as a regulation. This is defined by the standard erc20 technology of ethereum.

Future value we aim to

Due to the concrete application of the project, the total number of coins is not decided randomly or simply using the trend of other cryptocurrencies, but it has been chosen based on a profound study of the relation between the average number of coins possessed by each member of HTL community and the technical application and practice of the coin itself...by other words, exploiting our resources and experiences in the hotel world, basing our plans on realistic and secure numbers on an annual basis, considering the average turnover in relation with all the sector divided into 2 categories: medium-low range and high range. And then crossing these informations with the average number of end users who are using the HTL system. So it has been decided the right number of the total supply of the coin in order to guarantee an efficient cycle of the demand/supply curve which always maintain a

high value in the market; hence assuring in this way a convenient investment for the users, and a strong indication of solidarity in the market and upon our platforms.

Our vision for HTL coin & future value we aim to

Due to the practical application of HTL coin, our scope is to assure us as one of the coins most trustworthy in the crypto market, aiming as a minimum objective to be from the top 20 within the period of (...) years.

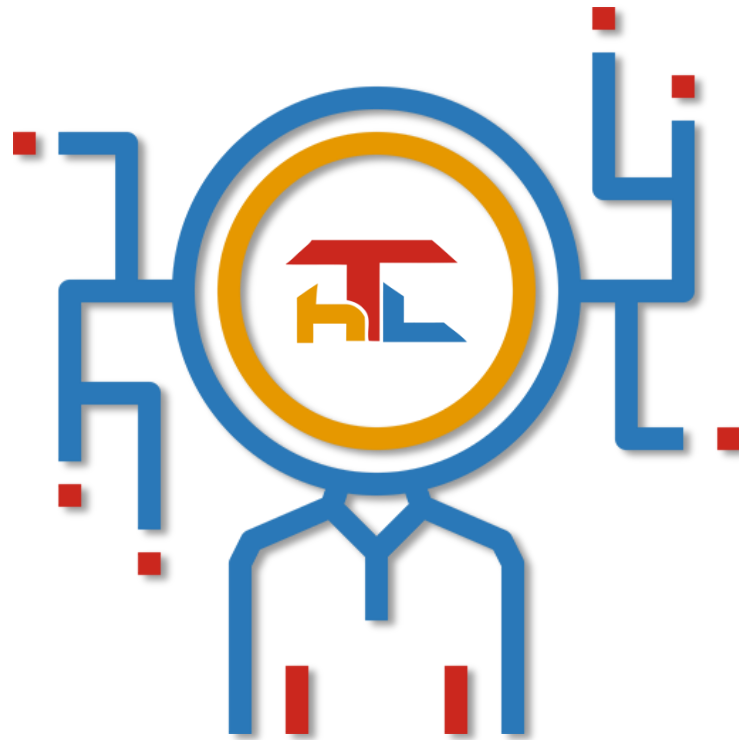

SERVICES

Investment in the coin

HTL coin represents a secure investment for the future, with the potential power related to the concrete and tangible services for which it has been thought and created.

Global coin

It has been conceived as coin with a global worldwide use for payments of online reservations for hotel/b&b/hostel/appartments...etc on a new universal platform through transactions super fast and secure with almost zero commission.

Hotel booking system

This is the core of the entire project, Hotel Booking System is promising as the nr. 1 site in the future for online reservations in the hotels sector, with transactions 100% through HTL coin revolutionizing the current traditional system, breaking down the barrier of national currency exchange and high costs of services with consequent disadvantages for both parties.

Staking

Another instrument for profit generation of the cryptocurrency is without doubt the service of trading bot (a system of trading which study the trends of the market and makes operations of a high percentage of succes) to whom the user attribute the proper capital, in exchange operations, obtaining a return up to ...%. Our team traders are relying on 2 trading bot with strong value: (profit trailer) and (gunbot)

Internal Exchange

Our Platform exchange will be available starting the initial phases for limited interchanges to BTC and ETH

Then the main coins of the market will be integrated on the system in successive phase

Credit cards for users and hotels

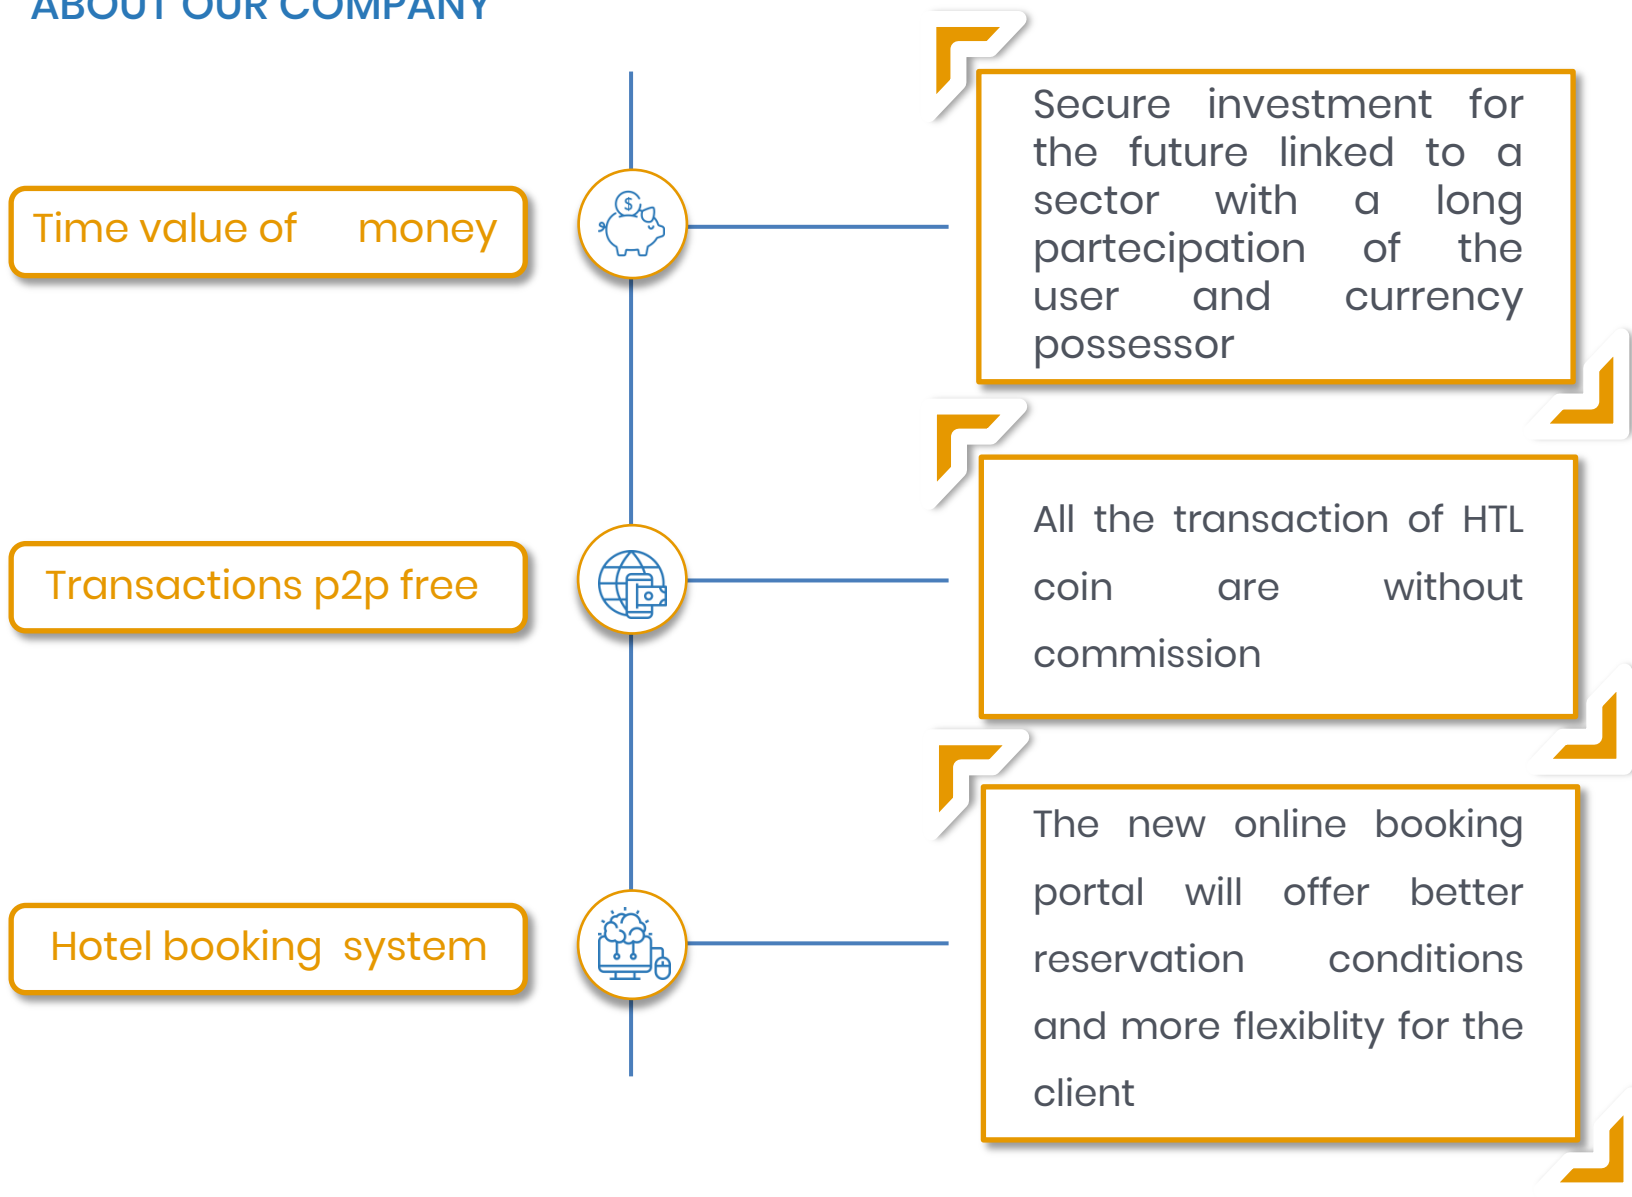

To complete the maximum functionality of the htl system coin, it will be possible to acquire a credit card, personalized or anonymos, connected to the disponibility in the portfolio of each private user and hotel, used for all purchases, also online.

ADVANTAGES OF HTLCOIN SYSTEM VERSUS THE CURRENT TRADITIONAL SYSTEM

ABOUT OUR COMPANY

No more credit cards delivered to a third Party or an intermediary:

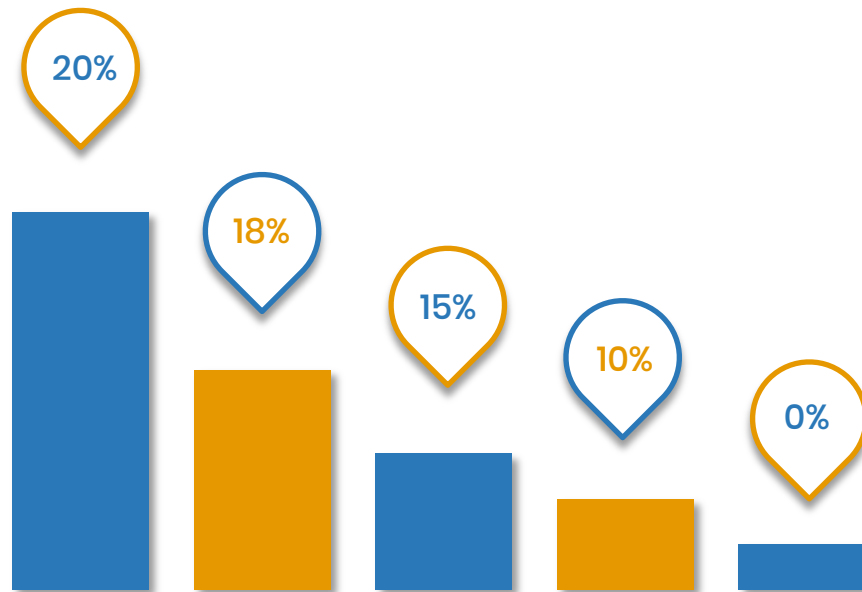

Another point of strength of the idea of HTL coin is the new method of payment through cryptocurrency which assure to the client the total security of a quick transaction with final import without the necessisity to communicate credit card informations to a third party with the risk of bad scenarios that could be faced, and without the need to monitoring eventual abuses

Breaking up costs of services in hotel:

Achievements

Not less important, is the breaking up of the high costs of intermediation of different online websites, which arrive to a percentages that have a real hard impact on the balance sheet of the hotel and which often represent barrier to ameliorate the service quality as this rise of cost leave a very small margin for the hotel to be able to invest in the improvements activities.

One of the main objectives of Hotel booking system, is to allow the hotel to grab almost 99% of the price of its sales, which we consider it a fair issue.

Credit cards for hotels and private

As already introduced, it will be possible to make a request and obtain a credit card personalized or anonymous connected to the portfolio, used for the purchases, guaranteeing the maximum efficiency of HTL coin idea and permitting the correct recycling of the currency in the market. An instrument very welcomed from the hotels which will be able to use it as a very direct and simple way to grab revenues through the cryptocurrency
